

# Solar powered pumping system – Lake/River to Tank

## Basic questions

Q1 Country

Q2 Nearest large town

Q3 How much water is required per day (in litres))

Q4 Distance of lake/river to storage tank in metres (see diagram – A)

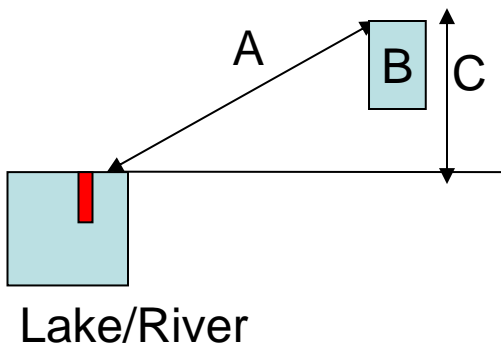

Q5 Height from top of lake to top of storage tank (B) in metres (see diagram – C)

Q6 Will a float switch be used to stop water when storage tank full or a manual switch?

Q7 If installed - Diameter (internal) of pipe work (see diagram - A)

Q8 Do you require generator back up when solar is not operational ?

Q9 Are there any known contaminants in the water (i.e. Iron , Manganese, Fluoride, Arsenic?)

Contact SCL Water Ltd for  
any clarification required.
